

PLANK PROFILE

The Briarwood Plank Profile is a precision roll-formed metal cladding sheet designed to replicate the clean, linear appearance of traditional timber boarding — without the maintenance.

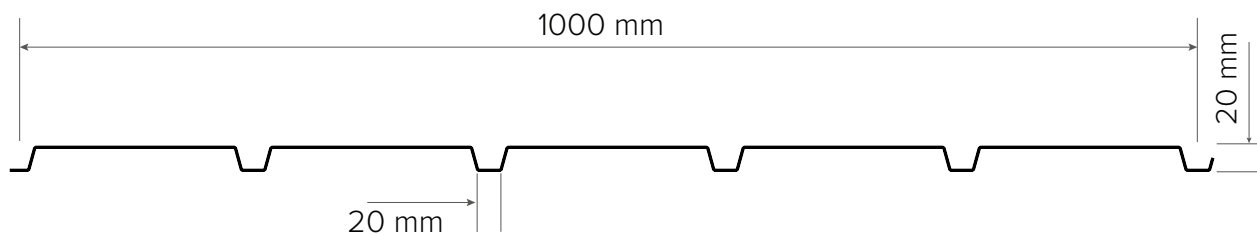

Its defined shadow lines create a sharp, modern finish, making it ideal for agricultural, commercial and contemporary buildings where appearance matters as much as performance.

Profile details

Installation from left to right

Standard profile

Available sheet lengths

Standard sheet length range: 1,000 mm to 8,000 mm

Minimum sheet length* 500 mm

Minimum sheet length* 15,000 mm

Any non-standard sheet lengths may incur additional manufacturing, packaging and handling/delivery charges

Profile manufacturing tolerances

Lengths under 3,000 mm: ± 10 mm

Lengths over 3,000 mm: ± 20 mm

Cover width: ± 5 mm

Squareness: $\leq 0.5\%$ of the cover width

All single skin sheets are manufactured and delivered within 3-5 working days nationwide with offload

ADDITIONAL PROFILES

The Briarwood Plank Profile is available with two finish options, both based on the same core profile.

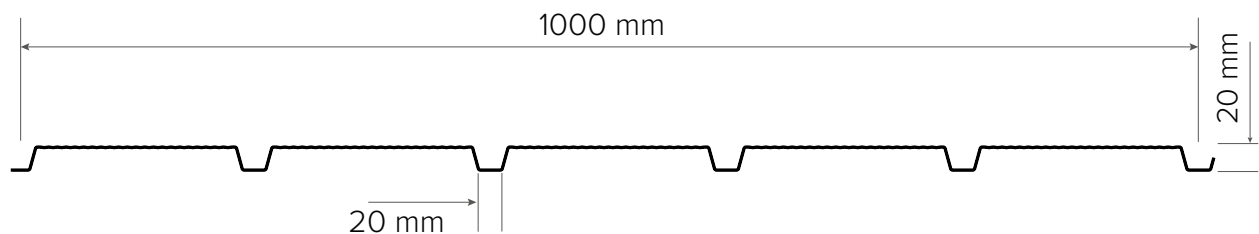

Sheets can be produced either plain or with small swages (microribs). These subtle formations run along the face of the sheet to increase rigidity and help reduce the visual appearance of oil canning.

This allows you to choose between a smoother, more uniform finish or a slightly textured surface, depending on the look and performance required for your project.
