Quality, certifications and guarantees

Briarwood Products is committed to providing high-quality roofing solutions for the agricultural and industrial sectors. Our EUROSIX fibre cement sheets are a testament to this commitment, and we take great pride in the various certifications and accreditations that we have achieved for this product.

Firstly, our EUROSIX fibre cement sheets conform to BS EN 494: 2004 Class C1X, which is the European standard for fibre cement profiled sheets. This standard specifies the requirements for fibre cement sheets for roofing and cladding applications, including their dimensional accuracy, mechanical properties, and water resistance. Our sheets have also been awarded EN standard, UKCA, and CE marks, which demonstrate their compliance with relevant European Union regulations.

Additionally, Briarwood Products adheres to ISO 9001 (Quality) and ISO 14001 (Environment) standards. The former sets out the criteria for a quality management system, ensuring that we consistently meet customer requirements and strive for continuous improvement. The latter specifies the requirements for an environmental management system, ensuring that we minimise our environmental impact and comply with relevant environmental regulations.

Briarwood Products is also a proud member of the Rural and Industrial Design and Building Association (RIDBA). RIDBA is the leading trade association for the modern agriculture and industrial buildings industry in the UK, and membership demonstrates our commitment to maintaining high standards of quality and professionalism.

Our EUROSIX fibre cement sheets and accessories have all been awarded the BBA Agrément Certificate, which is a mark of excellence based on rigorous national and European standards that validate a construction product's specialist formulation, capability, and uniqueness. This certificate provides assurance to our customers that our products have undergone extensive testing and have been independently verified to meet high standards of quality and durability.

Every batch of our EUROSIX fibre cement sheets undergoes the ACR[M]001:2014 Tests for non-fragility of profiled sheeting and has been certified as achieving Class C. This test measures the

resistance of a roofing material to damage from people walking on it, ensuring that the product is safe and reliable.

The EUROSIX fibre cement sheets are made from Portland Cement, Air, Water, Cellulose, and Reinforcement Fibres, with polypropylene strips manufactured into each corrugation. The polypropylene strips are placed in strategic locations along the entire length of the sheet to provide maximum impact strength without sacrificing the product's appearance, durability, or practicality. This construction method results in a product that is strong, lightweight, and easy to install.

Our EUROSIX fibre cement sheets are all Class 1 fire rated, which means that they have been tested and verified to provide the highest level of fire resistance. This is particularly important for agricultural and industrial buildings, where the risk of fire can be significant. Our customers can be confident that our products provide a high level of protection against fire, ensuring the safety of their livestock, machinery, and employees.

Briarwood Products stands behind the quality and durability of our EUROSIX fibre cement sheets by offering an independently backed 30-year guarantee, whilst also offering a 10-year colour guarantee on all coloured fibre cement sheets.

Our factory to farmer guarantee demonstrates our commitment to providing our customers with peace of mind and a sense of security. We understand the dedication and financial investment demanded by farming, and we are proud to provide our customers with a roofing solution that they can rely on for decades to come.

In conclusion, Briarwood Products' EUROSIX fibre cement sheets are a high-quality, durable, and reliable roofing solution that have been independently tested and certified to meet rigorous national and European standards.
